

## Prospective Instructional Technologists...

Are you interested in becoming a coordinator of educational technology at your school or at the district level, an educational media developer, a website creator, a video specialist, or a technology teacher in your classroom? Are you thinking of working in a corporation or business as a website designer, instructional designer, or technology trainer? If you want to focus on educational technology in corporate training or in schools, we have got you covered. Would you like to learn to master the skills needed for these positions? If you are.... Here's a great opportunity for you!

Join the Instructional Technology Program in the Charter College of Education at **California State University, Los Angeles**. Upon successful completion of the Program, candidates receive a **Master of Arts Degree in Computer Education & Technology Leadership**.

And, if you are a teacher, one of the special features of the Program is the intertwined curriculum for receiving both the MA degree and supplementary credential authorization at the same time. What a great deal! You can start the Program in Fall 2010 and complete it in Fall 2011 – only one year + plus a final quarter!

**More Importantly:** You can enter this field with a background degree in any content area (e.g., communications, engineering, computer science, business, linguistics, math, science, urban learning, arts, etc.).

**We have scheduled three information meetings for your convenience. You only need to attend one:**
