

Homework Format Math 310

- 1) You can either hand in a printout of your homework or mail the notebooks to sheubac@calstatela.edu. When a week's homework consists of multiple assignments, make **one** final notebook by copying and pasting the individual notebooks into a single notebook. Make sure you put as the subject of the email: **Math 310 – HMWK # - your name**. (The homework number refers to the week in which the homework was assigned.) EMAILS WITHOUT THIS SUBJECT HEADING MAY NOT BE READ!!!
- 2) Before emailing your homework, in Version 5.2, use **Kernel → Delete All Output**. Then test your notebook by using **Kernel → Evaluation → Evaluate Notebook**. This is what I will see, and if there is any junk that you want to get rid off, do so now. Once you are satisfied with the notebook, use **Kernel → Delete All Output** once more, then save the notebook.
In Version 6.0, use **Kernel → Delete All Output**, and then select all cells of your notebook (which should be easy if you started with a title heading – then you can just click the rightmost cell), then use Shift Enter to evaluate the cells.
- 3) Make sure that your name appears on the top of the notebook, in a Title, Section or similar type of cell (not just a text cell). Group each problem by making the problem number a subsection cell.
- 4) Make comments on the problems in text cells (use **Format → Style → Text** or **Alt-7**). Do not just hand in a list of *Mathematica* commands.
- 5) You can check which lessons are assigned for a particular week by going to my website, click on Schedule, then Math 310, then Class Schedule.
