CHEM 103 Final Exam

Glossary

\[
R = 0.08206 \text{ L atm mol}^{-1} \text{ K}^{-1} = 8.314 \text{ J mol}^{-1} \text{ K}^{-1}
\]

\[
F = 96,485 \text{ C mol}^{-1}
\]

\[
c = 3.00 \times 10^8 \text{ m s}^{-1}
\]

1 V = 1 J/C
1 Amp = 1 C/s
e = 1.602 \times 10^{-19} \text{ C}

Multiple Choice

Identify the letter of the choice that best completes the statement or answers the question.

1. Which compound would not be used as an antacid for the treatment of heartburn?
   a. KOH
   b. Al(OH)3
   c. Mg(OH)2
   d. NaHCO3
   e. CaCO3

2. The particle used to bombard the nucleus in the reaction shown is a(an)
   \[
   ^{235}_{92} \text{U}^+ + \_ \rightarrow ^{141}_{56} \text{Ba} + ^{92}_{36} \text{Kr} + 3^1_0 \text{n}
   \]
   a. alpha particle.
   b. positron.
   c. proton.
   d. neutron.
   e. beta particle.

3. The reaction between acetic acid (CH₃COOH) and water is written as
   a. \[
   \text{CH}_3\text{COOH} + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{COO}^- + \text{H}_3\text{O}^+
   \]
   b. \[
   \text{CH}_3\text{COOH} + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{COO}^- + \text{OH}^-
   \]
   c. \[
   \text{CH}_3\text{COOH} + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{COOH}_2^+ + \text{OH}^-
   \]
   d. \[
   \text{CH}_3\text{COOH} + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{COO}^- + \text{H}_3\text{O}^+
   \]
   e. \[
   \text{CH}_3\text{COOH} + \text{H}_2\text{O} \rightleftharpoons \text{CH}_3\text{COOH}^+ + \text{H}_3\text{O}^+
   \]

4. In the anode compartment of an electrochemical cell, the electrode is being __________, and __________ are flowing in from the salt bridge.
   a. oxidized; anions
   b. oxidized; cations
   c. oxidized; electrons
   d. reduced; cations
   e. reduced; anions

5. For a zinc-platinum electrochemical cell, calculate the value of \(E_{\text{cell}}\) when the concentration of Pt²⁺(aq) is 0.050 M and the concentration of Zn²⁺(aq) is 1.1 M. \(E_{\text{cell}}^o = 1.96 \text{ V}\) under standard conditions. Pt is the less active metal.
   a. 2.04 V
   b. 2.00 V
   c. 1.96 V
   d. 1.92 V
   e. 1.88 V

6. Will a precipitate form when 10.0 mL of 0.500 M NaCl is added to 10.0 mL of 0.0500 M AgNO₃? The \(K_{sp}\) for AgCl is \(1.8 \times 10^{-10}\).
   a. Yes, because \(Q < K_{sp}\)
   b. Yes, because \(Q = K_{sp}\)
   c. Yes, because \(Q > K_{sp}\)
   d. No, because \(Q < K_{sp}\)
e. No, because \( Q > K_{sp} \)

7. Consider a buffer solution made up of \( \text{H}_2\text{PO}_4^- \) and \( \text{HPO}_4^{2-} \). For \( \text{H}_2\text{PO}_4^- \), \( K_a = 6.2 \times 10^{-8} \). What mole ratio of \( \text{HPO}_4^{2-} \) to \( \text{H}_2\text{PO}_4^- \) will give a pH of 7.35?
   a. 0.14 to 1
   b. 0.72 to 1
   c. 1 to 1
   d. 1.4 to 1
   e. More information is needed to answer this question.

8. Use the data given to calculate the value of \( K \) for the reaction at 5°C
   \[ \text{Ag}^+(aq) + \text{Cl}^- (aq) \rightleftharpoons \text{AgCl}(s) \]
   
   \[ \begin{array}{c|ccc}
   S^\circ (J K^{-1} mol^{-1}) & \text{AgCl(s)} & \text{Ag}^+(aq) & \text{Cl}^- (aq) \\
   \text{H}^\circ_f (kJ/mol) & 96.2 & 72.68 & 56.4 \\
   \end{array} \]
   
   a. \( 1.9 \times 10^{12} \)
   b. \( 3.7 \times 10^{10} \)
   c. \( 5.7 \times 10^6 \)
   d. \( 1.3 \times 10^6 \)
   e. 1.0

9. Nature favors exothermic reactions because after such a reaction
   a. energy previously concentrated in a few particles is now dispersed over more particles in the system.
   b. energy previously concentrated in a few particles is now dispersed over more particles in the surroundings.
   c. energy previously concentrated in a few particles is now dispersed over more particles in both the system and the surroundings.
   d. energy previously held in many particles is now concentrated in a few, resulting in a temperature rise.
   e. energy previously held in many particles is now concentrated in a few, resulting in a temperature fall.

10. Which set of conditions describes a reaction that is most likely to proceed?
   a. endothermic, decreasing entropy, high activation energy
   b. exothermic, decreasing entropy, high activation energy
   c. exothermic, increasing entropy, high activation energy
   d. exothermic, increasing entropy, low activation energy
   e. endothermic, decreasing entropy, low activation energy

11. Which statement concerning fusion is correct?
   a. Extremely high temperatures are not required.
   b. A plasma of unbound nuclei and electrons must be formed.
   c. Large nuclei are needed as reactants for fusion reactions.
   d. Fusion reactions require large amounts of energy to sustain them.
   e. Products of fusion reactions are always radioactive.

12. Alpha particles are best described as
   a. neutral particles that weigh approximately one atomic mass unit.
   b. positive particles that are identical to the nucleus of an atom of \( ^4\text{He} \).
   c. electrons ejected at high speeds from a radioactive nucleus.
   d. high-speed particles similar in size to an electron, but oppositely charged.
   e. a form of electromagnetic radiation.

13. The \( K_{sp} \) expression for silver phosphate, \( \text{Ag}_3\text{PO}_4 \) is
   a. \( [\text{Ag}^+][\text{PO}_4^{3-}] \).
b. \([\text{Ag}^+][\text{PO}_4^{3-}]^3\).

c. \(3[\text{Ag}^+][\text{PO}_4^{3-}]^3\).

d. \(3[\text{Ag}^+][\text{PO}_4^{3-}]^3\).

e. \(3[\text{Ag}^+][\text{PO}_4^{3-}]^3\).

14. The relationship between Gibbs free energy and \(E^\circ_{\text{cell}}\) is \(G^\circ = \)

a. \(0.0592 \frac{n}{n} \log K\)

b. \(0.0592 \frac{n}{n} \log K\)

c. \(-nE^\circ_{\text{cell}}\)

d. \(nE^\circ_{\text{cell}}\)

e. \(-RT \ln K\).

15. The value of the ionization constant for a weak acid HA is \(4.2 \times 10^{-7}\). What is the pH of a 0.35 M solution of this acid?

a. 6.83
b. 6.38
c. 3.42
d. 3.19
e. 2.96

16. Which acid-base titration would yield a titration curve of the general form shown?

a. \(\text{H}_2\text{CO}_3\) titrated with \(\text{NaOH}\)

b. \(\text{NaOH}\) titrated with \(\text{H}_2\text{PO}_4\)

c. \(\text{Na}_3\text{PO}_4\) titrated with \(\text{HCl}\)

d. \(\text{H}_2\text{SO}_4\) titrated with \(\text{NaOH}\)

e. \(\text{H}_3\text{PO}_4\) titrated with \(\text{NaOH}\)

17. The value of \(E^\circ_{\text{cell}}\) for an aluminum-nickel electrochemical cell is +1.41 V at 25°C. Calculate the value of \(G^\circ\) for this cell under standard conditions.

a. -816 kJ
b. -680 kJ
c. -272 kJ
d. +403 kJ
e. +680 kJ

18. Gamma radiation is best described as

a. neutral particles that weigh approximately one atomic mass unit.
b. positive particles that are identical to the nucleus of an atom of \(^4\text{He}\).
c. electrons ejected at high speeds from a radioactive nucleus.
d. a form of electromagnetic radiation.
e. high-speed particles similar in size to an electron, but oppositely charged.
19. Ammonia is a weak base and perchloric acid is a strong acid. Which statement is true of a solution of ammonium perchlorate?
   a. It is strongly acidic.
   b. It is weakly acidic.
   c. It is neutral.
   d. It is weakly basic.
   e. We cannot predict its acid-base properties without more information.

20. A buffer solution is 0.500 M in ascorbic acid and 0.500 M in sodium ascorbate. Its pH is 4.10. After addition of 10 mL of 1 M NaOH to 1.00 L of this buffer, the most likely value of the pH is
   a. 4.08.
   b. 4.10.
   c. 4.12.
   d. 5.95.
   e. 10.15.

Exhibit 17-1
A 50.00 mL sample of 0.0950 M acetic acid (K_a = 1.8 \times 10^{-5}) is being titrated with 0.106 M NaOH.

21. Refer to Exhibit 17-1. What is the pH at the equivalence point of the titration?
   a. 5.28
   b. 7.00
   c. 8.72
   d. 9.26
   e. Need more information to answer

22. One of the reactants used to produce nitrogen for automobile air bags is _______.
   a. ammonia
   b. ammonium nitrate
   c. liquid air
   d. nitric acid
   e. sodium azide

23. Beta particles are best described as ________, ejected at high speeds from a radioactive nucleus.
   a. protons
   b. particles similar in size to an electron, but oppositely charged
   c. electrons
   d. neutral particles weighing approximately one atomic mass unit
   e. positive particles identical to the nucleus of an atom of ^4He

24. In the reaction shown, the radiation produced is a(an)

\[ ^{51}_{22} \text{Ti} \rightarrow ^{51}_{23} \text{V} + \text{} \]

   a. alpha particle.
   b. positron.
   c. beta particle.
   d. neutron.
   e. gamma ray.

25. ^{90}\text{Sr} is an isotope produced from atmospheric testing of nuclear bombs. If nuclear testing was stopped in 1960, what percentage of radioactivity due to ^{90}\text{Sr} remained in 2000? The half-life of ^{90}\text{Sr} is 28.5 years.
   a. 62.2 %
   b. 37.8 %
   c. 12.3 %
   d. 0.85 %
   e. virtually 0 %

26. The half-life of radon-222 is 2.8 days. A homeowner used a radon test-kit to sample the air in his home, but forgot to send it for processing for 30 days. If the level of radon was actually 100 counts, what value would be reported by the test lab?
   a. 94 counts
b. 17 counts
c. 9.3 counts
d. 1.5 counts
e. 0.060 counts

27. All of the following are uses of radioactivity except
a. radiation therapy.
b. irradiation of food by microwaves.
c. tracers in medical procedures.
d. production of electricity.
e. dating of archaeological remains.

28. In the reaction shown below, __________ is the oxidizing agent and __________ the reducing agent.
\[ \text{Zn(s)} + \text{H}_2\text{SO}_4(aq) \rightarrow \text{H}_2(g) + \text{ZnSO}_4(aq) \]
a. \( \text{Zn}^{2+}; \text{H}_2 \)
b. \( \text{Zn}; \text{H}^+ \)
c. \( \text{H}_2; \text{Zn}^{2+} \)
d. \( \text{H}^+; \text{Zn} \)
e. \( \text{H}^+; \text{Zn} \)

29. A certain reaction has \( \Delta H_{\text{rxn}} = +177.8 \text{ kJ} \), and \( \Delta S_{\text{rxn}} = +160.5 \text{ J/K} \). Above what temperature does it become product-favored?
a. 384 °C
b. 630 °C
c. 835 °C
d. 1108 °C
e. 1381 °C

30. Which has the highest entropy?
a. \( \text{H}_2\text{O}(g) \) at 150°C
b. \( \text{H}_2\text{O}(g) \) at 100°C
c. \( \text{H}_2\text{O}(l) \) at 100°C
d. \( \text{H}_2\text{O}(l) \) at 4°C (the temperature of maximum density)
e. \( \text{H}_2\text{O}(s) \) at -50°C

31. A 100 MW power plant uses the following nuclear reaction to generate heat, thereby producing steam that drive a turbine to generate electricity:
\[ ^{235}_{92}\text{U} + ^1_1\text{n} \rightarrow ^{140}_{53}\text{I} + ^{94}_{38}\text{Sr} + 2^1_1\text{n} \]
If the efficiency of the plant is 27% (27% of energy produced by reaction is converted into electricity), how many grams of \( ^{235}_{92}\text{U} \) must be consumed in a 24 hour period to operate the 100 MW plant?

\[ 1 \text{ W} = 1 \text{ J/s} \]
\[ ^1_1\text{n} = 1.00867 \text{ g/mol} \]
\[ ^{94}_{38}\text{Sr} = 93.91536 \text{ g/mol} \]
\[ ^{140}_{53}\text{I} = 139.93121 \text{ g/mol} \]
\[ ^{235}_{92}\text{U} = 235.0439 \text{ g/mol} \]
32. From the following information, determine the solubility product, $K_{sp}$, of AgBr(s).

\[
\begin{align*}
\text{AgBr(s) + e}^- &\rightarrow \text{Ag(s) + Br}^-(aq) & E^o = 0.071 \text{ V} \\
\text{Ag}^+(aq) + e^- &\rightarrow \text{Ag(s)} & E^o = 0.799 \text{ V}
\end{align*}
\]
