

25 WORDS: ETHANOL

Ethanol, C_2H_5OH , is a flammable and colorless liquid that is mentioned simply as alcohol. Its various uses include an industrial ingredient and for fueling transportation. It is also an active ingredient in alcoholic beverages.

Ethanol, (Symbol C_2H_5OH) is an organic compound and is the chemical name for alcohol. It is made by fermentation and has a molar mass of 46.06844 g/mol.

Ethanol (C_2H_5OH ; drinking alcohol) is an organic compound which is a flammable, volatile liquid. Ethanol is produced from sugar fermentation or petroleum-refining. Upon drinking, it intoxicates a human body. It is used as a solvent.

Ethanol is an volatile, flammable, colorless liquid. It is known for its use on alcohol beverage and the alcohol

Ethanol, CH_3CH_2OH , is a flammable, colorless liquid. It is part of the alcohol group and made both naturally through fermentation of sugar and synthetically. It is used industrially in alcoholic beverages and fuel.

Ethanol, also called ethyl alcohol, is a clear, colorless alcohol fuel made from the sugars found in grains, such as corn, sorghum, and wheat, as well as potato skins, rice, and yard clippings. It's a renewable fuel because it's made from plants.

Ethanol is also called ethyl alcohol, grain alcohol or drinking alcohol. Ethanol is also known as EtOH and is it a volatile flammable, colorless liquid.

Ethanol, C_2H_5OH , is a colorless, clear, and volatile liquid classified as an alcohol. It is used in fuels which can be created from sources such as corn and feed stock waste.

Ethanol, is a volatile, flammable colorless liquid. It is best known as the type of alcohol found in alcoholic beverages and in thermometers. In common usage, it is often referred to simply as alcohol.

Ethanol, C_2H_5OH , is a volatile, flammable, colorless liquid. Its molar mass is 46.06844 g/mol and its boiling point is 78.4°C. When burned, it produces a smokeless blue flame that isn't always visible in visible light.

Ethanol is a flammable and colorless liquid that is best known as the type of alcohol found in alcoholic beverages and thermometers. It is commonly just referred to simply as alcohol.

Ethanol is a clear, colorless alcohol fuel made from sugars found in grains. It can be used as a fuel, mainly as a biofuel alternative to gasoline.

Ethanol; C_2H_5OH , is a volatile, flammable, colorless liquid. Ethanol is a straight-chain alcohol and is mainly used as a motor fuel ,fuel additive and in alcoholic beverages.

The molecular formula for ethanol is CH_3CH_2OH . Ethanol is a straight-chain alcohol. Ethanol has alot of uses such as flavouring, coloring, medicines, etc.

Ethanol: a volatile, flammable, colorless liquid. It is best known as the type of alcohol found in alcoholic beverages and in thermometers. In common usage, it is often referred to simply as alcohol.

Ethanol is the most known alcohol that is a flammable, colorless liquid. Its chemical formula is C_2H_5OH as a straight chain. It is used for medicines, colorings, scents, flavorings and other.

Ethanol, C_2H_5OH , is also known as ethyl alcohol. It is used as a fuel in gasoline. Ethanol is also a depressant, and affects the central nervous system.

Ethanol is a chemical compound that is a hot topic in the world because people are thinking of using it as a replacement of gasoline, though it is also found elsewhere, like in alcoholic drinks.

Ethanol is a colorless liquid that can be found in alcoholic drinks. It is flammable and slightly basic although it is almost neutral. It has a strong recognizable odor.

Ethanol, $EtOH$, also known as ethyl alcohol, is found in alcoholic drinks and as an alternative fuel source (bio-ethanol). This bio-ethanol comes most of the time from corn crops

Ethanol is a flammable liquid with the chemical formula C_2H_5OH . It is the liquid used in alcoholic beverages, and can be used as a fuel for motor vehicles.

Ethanol has the chemical formula C_2H_5OH and it is a volatile, flammable, and colorless liquid.

Ethanol is the type of alcohol that is used in alcoholic beverages and thermometer.

Ethanol, also called ethyl alcohol and grain alcohol, is a colorless, flammable liquid. It burns with a blue flame that is not always visible in normal light.

Ethanol, a straight-chain alcohol, also known as ethyl alcohol, grain alcohol, or drinking alcohol, that has the molecular formula of C_2H_5OH . This molecule is highly flammable and a colorless liquid substance.

Ethanol is a flammable, colorless, liquid most renowned for its use in alcoholic beverages. Its molecular formula is C_2H_5OH . Ethanol's hydroxyl group makes it slightly basic at a pH of 7.33. Ethanol is largely used as an alternative fuel.

ethanol; Ethanol, also known as $EtOH$, is a flammable and colorless liquid. It is widely known as the type of alcohol found in alcoholic beverages and thermometers.

Ethanol, a volatile, flammable, colorless liquid with the molecular formula of C_2H_5OH , is most commonly known as alcohol. Ethanol can be oxidized to acetaldehyde, and can be further oxidized to acetic acid.

Ethanol, C_2H_5OH , is a liquid that is volatile, colorless, and flammable. Ethanol is used in alcoholic beverages, thermometers, scents, flavorings, colorings, and as a car fuel.

Ethanol has the chemical formula of C_2H_6O , it is composed of a carbon in the methyl group (CH_3-) attached to the carbon of a methylene group ($-CH_2-$) bound to hydroxide.

Ethanol has also known as the drinking alcohol. Ethanol's chemical formula is CH_3CH_2OH . The ethanol found blue flame in Bunsen burner, which is very flammable and has a very high temperature to burn things up.

Ethanol has a widespread uses as solvents of substances intended for human contact, including scents, flavoring, colorings, and medicines. Ethanol has a history as a fuel for heat and light, also for internal combustion engines.

Ethanol is a volatile, flammable, colorless liquid. It is best known as the type of alcohol found in alcoholic beverages and in thermometers. In common usage, it is often referred to simply as alcohol.

Ethanol is very flammable, has a strong odor, and is in our everyday alcohol. According to Wikipedia, it burns with a smokeless blue flame that it cannot be seen in normal light.

Ethanol; Ethanol, C_2H_6O , is a volatile, flammable, colorless liquid. It has been used since prehistoric times and is often referred to as alcohol. When ingested by the human body, ethanol causes intoxication effects.

Ethanol, C_2H_5OH , is a clear, flammable, odorous liquid made by fermenting and then distilling starch or sugar crops. Due to its high octane, ethanol can be used as alternative fuel.

Ethanol, is a volatile, flammable, colorless liquid. It is best known as the type of alcohol found in alcoholic beverages and in thermometers. In common usage, it is often referred to simply as alcohol.

Ethanol was used in prehistoric times as an ingredient in alcoholic beverages. Nowadays, ethanol is found in automobiles, rockets, and hand sanitizers. Ethanol kills bacteria, viruses, and fungi by depriving them of lipids and protein.

CH_3CH_2OH ; Ethanol is normally found in alcohol and affects the human nervous system in many ways which classifies it as a drug. It is a colorless clear liquid that is also flammable.

Ethanol is a colorless and flammable liquid. It is also known as EtOH and is in alcoholic beverages and thermometers. It has toxic effects in the body.

Ethanol, C_2H_5OH , is a volatile, flammable, colorless liquid. It is the best known as the type of alcohol found in alcoholic beverages and in thermometers.

Ethanol, CH_3CH_2OH , is an alcohol, a group of chemical compounds whose molecules contain a hydroxyl group, $-OH$, bonded to a carbon atom. Ethanol melts at $-114.1^\circ C$, boils at $78.5^\circ C$, and has a density of 0.789 g/mL at $20^\circ C$.
